

Week 1 Live Synopsis

After watching the video of the week 1 live meet, you start the lesson with debugging the javascript addition page and how to access the developer tools available. Then what is DOM, and a brief overview. Next we see how to grab elements into javascript, and then you move to the random integer dice game. You go over many parts from how to first set it up, how to alter elements, and how to create new ones. Lastly you explain how to create an unordered list, and how to get the dice to move correctly across the screen. I think that about covers it!
